What is the project about?

- We advertise product promotions for companies and seller to customers through our website.

Why we choose this topic?

- We choose this topic for 3 main reasons
 - We focusing on developing an alternative for people to get all promotions productions from different companies and seller from the market in to one place so people easy to find and buy better.
 - Help seller to published there promotions productions to the world so their target customer will easy to see.
 - In future it can grow to become online market for people over the world can sell and buy many products easy in one place.

What is our goal of making this happen?

Our Goal:

This website provides sellers and customers the best experience to post their promotion products to customer and all the promotion ads will post on the website and give many different promotions products so all people over the world will see. First, seller need to register in our system to become our user then they can post their promotion products in different categories to the website. Second, all posts will display in website in different categories and with detail of product and company with sell that product such ask product old price, discount(%), company name, contact, location...etc. We start this process in Cambodia the first location then push to publish over the world. Next Goal when we get a lot of our client and this website popular for all people we will develop this website not only promotions ads but we

can sell and buy it will make more easy life. Final goal we want to see this website is become a big online market or people all over the world.

How my team build this platform?

Basically, we scratch the user interface and we decide to have 2 different platform Frontend for customer to see all promotions and Backend for seller (our client) where they can post all their promotions products. We have 3 members so we give different job for everyone:

Hing Kosal: Team Leader & Full stack

Chhorn Soktheng: Frontend interface

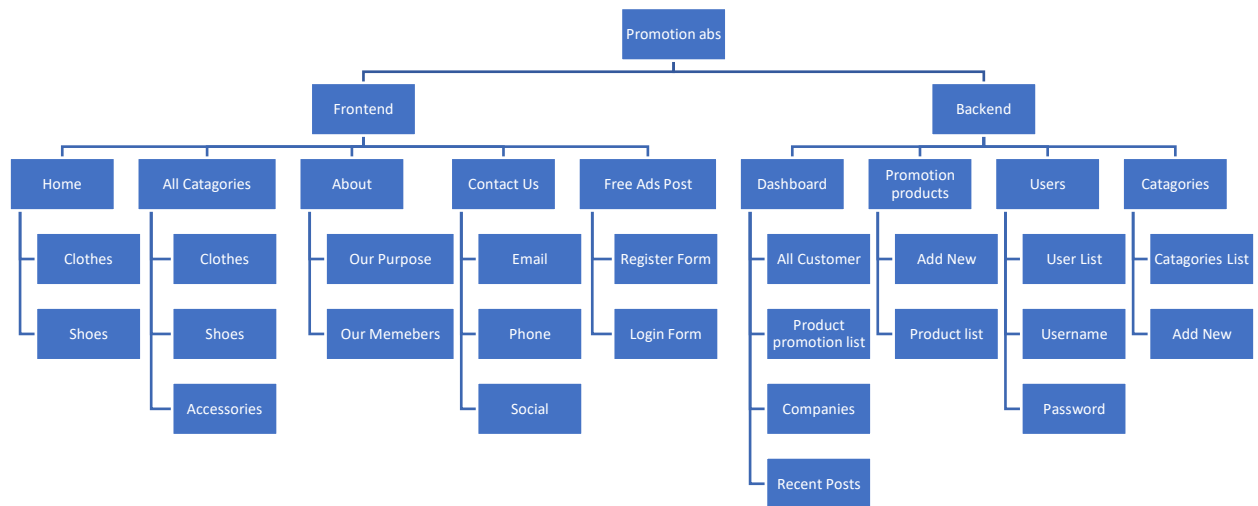

Kong Sreya: Backend interface

First, we built both static of frontend and backend by using other free template on internet and using HTML, CSS, JAVASCRIPT, and BOOTSCRAP to edit it by keep template or form we want and add our own template, then delete what we don't want. Third, we also got support from W3school web, YouTube and especially plenty of method and tool from our instructor. Last but not least, we use PHP to make our website to dynamic like input data into database and call data back and using MYSQL as a database management system.

Week II

We will update our static web to become a dynamic web by using PHP connect with MYSQL and update more standard interface.
